## 3 READING TIPS

Numbers: on many cooktops, 화력 1 is the weakest and 9 is the strongest. A small light next to a burner shows the one you chose. Read the number next to that light.
Safety: if no button works, 잠금 may be on. On many models you hold 잠금 for a few seconds to unlock it. After cooking, H can stay on for a while. Do not touch the glass until it goes off.

The panel words here are common examples. Your cooktop may use slightly different names or symbols.
